TRACK AND INTENSITY OUTLOOK

Refer to "Other Hazards affecting Land Areas" for more details. Furthermore, the track may still shift within the limit of the forecast confidence cone.**
- On the track forecast, VERBENA will move generally west northwestward and will make landfall or pass close over northeastern Mindanao this afternoon before crossing Visayas and the northern portion of Palawan from today until Wednesday (26 November). It will then emerge over the West Philippine Sea by Wednesday morning.
- VERBENA may slightly intensify prior to making landfall over northeastern Mindanao but will likely cross the Philippine landmass as a tropical depression. Once it emerges over the West Philippine Sea, it is then forecast to intensify further into a tropical storm.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**
